

Cryogenic and High Temperature Valve

U.S. Type 859 (Includes Sub-CFL)

DESCRIPTION

The U.S. Type 859 globe control valve with cooling fin bonnet is used in extreme temperature applications. It is designed for modulating flow control in industrial applications at 400...700° F (204...371° C) at pressures less than 5000 psi (344 bar) (dependent on body and packing material). The added bonnet length and fins serve to reduce the heat at the packing area. This allows the standard CV ring packing to be used at higher process temperatures than could normally be tolerated with the standard valve.

APPLICATIONS

The Type 859 valve is widely used in high temperature applications where steam, hot water, hot hydraulic oil or other fluids or gases must be controlled precisely through 1/4 in. (6 mm), 1/2 in. (12 mm), 3/4 in. (19 mm) or 1 in. (25 mm) lines. Extended cooling fin valves are available for applications that exceed 700° F (371° C).

During the selection process, consult the appropriate pressure and temperature rating literature of the body and packing materials. This information is available in the catalog or from the factory.

MATERIALS

Body – Bonnet	
Standard	316 stainless steel, carbon steel (WCB)
Optional	Monel®, Alloy 20, Hastelloy® C and B or ASTM equivalent
Innervalue	
Standard	316 stainless steel
Optional	Stellite®, Monel, alloy 20, Hastelloy C and B or ASTM equivalent
Packing	
Standard	TFE chevron rings
Optional	Graphite
Actuator	
	Die cast aluminum
	316L stainless steel on standard 1/2 in. (12.7 mm) models

ACTUATOR OPTIONS

Standard	Air-to-open, fail close Air-to-close, fail open
Optional	With integral top mounted positioner
Standard Signals	3-15#, 3-27#, 6-30#
Optional Signals	3-9#, 9-15#, with positioner
Accessories	Filter regulator, gauges, I/P converter, limit switches, handwheel, solenoids

Shown with Type 754 Actuator

STANDARD FEATURES

- 1/4 in. (6 mm), 1/2 in. (12 mm), 3/4 in. (19 mm) and 1 in. (25 mm) models
- Interchangeable trim sets
- Cooling fin bonnet
- Trim characteristics: Linear, equal percent, quick open or double taper
- TFE chevron packing
- ANSI Class IV shutoff (size O and larger)
- High temperature rating

OPTIONAL FEATURES

- Butt and socket weld ends, BSPP, tube connection and others
- Bellows packing solutions
- Angle pattern body
- Reduced Emissions Kalrez® (REK), graphite, spring-loaded chevron and others
- Exotic alloys for complete valves or trims
- Stellite trims & soft seats (PTFE & Kel-F)
- TiN coating of innervalue stem and seat

PRESSURE VS TEMPERATURE RATINGS FOR VALVE SUPERSTRUCTURE

The pressure/temperature ratings listed here are based on material cross sections at the joint between the body and bonnet where a gasketed screw type bonnet is used. When the proper torque levels are used, the valve should not experience rupture of the joint or the material. The listed torque levels were used in hydrostatic tests at the factory at 70° F (21.1° C) at maximum body rating and were found to provide acceptable seating. Other factors, such as high or cyclic temperatures, light process gases, or poor gasket surfaces can dictate the ability of a seal to be made. Under such conditions, the only way to be sure of tight sealing is to perform a test under the actual process conditions.

These charts are not intended as an indication of functionality or suitability for control service. Other charts are available to assist in the choosing of valve type, bonnet type, trim type and actuator.

When flanges, fittings or other pressure containing elements are added to the valve, the pressure rating of the total valve assumes the rating of the weakest component.

The following charts exclude packing or end fittings:

1/4 in. Research Control Valve

K...O and the P series trims are considered reduced trims when installed in a 1/2 in. (12.7 mm) valve. Occasionally, P1...P9 trims are made on a 0.042 in. (1.1 mm) orifice.

PACKING/MEDIA TEMPERATURE**IMPORTANT**

To prevent the stem from freezing, avoid packing temperatures below 0°C (32°F).
