Be a crown & bridge machine.

**Post & Core System**
Introducing an integrated system for post & core-dependent crown and bridge procedures.

The end result of every post & core procedure will be a crown or bridge. Pentron’s Post & Core System empowers you to build a structurally sound and healthy foundation to deliver consistent restorations.

- FibreKleer™ 4x Fiber Posts
- Build-It™ FR Fiber Reinforced Core Material

**Superior posts, great variety.**

FibreKleer 4x Fiber Posts provide the ultimate in flexural strength, radiopacity, core retention, tooth preservation, esthetics, and size and shape options.

**Strong & Flexible**
Fiber reinforced posts are strong and flexible – they mimic the properties of dentin.

**Lifelike esthetics**
Translucent glass fibers help create natural looking restorations.

**Simple Detection**
Post is clearly identified on a radiograph with radiopacity up to 400% of aluminum.

**The next best thing to dentin.**

Build-it FR Fiber Reinforced Core Material is the perfect material to use with FibreKleer 4x posts. It self-cures in minutes or light-cures in seconds to a hard consistency that cuts like dentin without ditching.

---

**Features & Benefits**

**Easy Handling**
Flows and stacks where you want without slumping.

**Dual Cure**
Self-cures in minutes, or light cures in seconds to a hard consistency.

**Strong & Reliable**
Specially treated glass fibers provide compressive strength for a strong and reliable foundation.

**Fast and Easy**
Faster to use than composite without the need to cure in 2mm increments.

---

**Clinical Case**

Post & core restoration using Pentron’s Post & Core System*.

1. Initial view of teeth 29 and 30 after completed root canal. All healthy dentin tissue is retained.
2. Root canal preparation using FibreKleer 4x drill and tapered FibreKleer 4x Fiber Post.
4. Total etch technique.
5. Application of a bonding agent.
7. View of core build-up prior to crown preparation.
