Congratulations! You have purchased a caries detection device unlike any other.

Utilizing near-infrared transillumination, CariVu images look similar to X-rays—healthy tooth structure will appear translucent while lesions, decay, and cracks will trap light and appear dark. Compact, portable and easy-to-use, DEXIS CariVu offers an efficient way to detect early-stage caries with 99% accuracy*—so you can begin a more minimally invasive plan of care right away.

DEXIS CariVu Case Example

As you can see in this radiograph, the distal of #20 shows slight demineralization in the enamel interproximally.

However, the CariVu image clearly shows that there is an area of concern with the distal of #20.

The intraoral photo confirms suspicions of caries.

Follow the quick and easy steps below to get your device setup for use.

Please also review the DEXIS CariVu Operator Manual prior to use, which is included in your product box or available online at kavo.com.

1. Carefully open your DEXIS CariVu box and identify the included product components:
   - A. CariVu device
   - B. Two tips (large and small)
   - C. Custom holder
   - D. Operator manual

2. Contact KaVo Tech Support for easy, remote installation of your device. Call 888-ASK-KAVO, Monday thru Friday, from 8am to 8pm, Eastern Time.

3. A new owner support representative will contact your office to schedule your CariVu training session.

If you are new to DEXIS, register your purchase online at kavo.com

DEXIS CariVu comes with a one-year manufacturer warranty. You also have the option to purchase additional coverage based on your practice’s needs.
