DO NOT OPERATE THIS DEVICE UNTIL YOU HAVE READ THIS MANUAL and reviewed the accompanying materials.

Disclaimer: NOMAD® Pro Veterinary is sold with the understanding that the user assumes sole responsibility for radiation safety (as well as any state, provincial, or local regulatory compliance) and that Aribex, Inc., its agents or representatives, do not accept responsibility for:

a) injury or danger to personnel from X-ray exposure,
b) image over/under exposure due to poor operating techniques or procedures,
c) equipment not properly serviced or maintained in accordance with instructions contained in this publication, and
d) equipment which has been damaged, modified, or tampered with in any way.

Aribex and NOMAD are registered trademarks within the United States and other countries. NOMAD Dental, NOMAD Pro, PORTA-X, and the ARIBEX and NOMAD logos are trademarks of Aribex, Inc. worldwide. U.S. patents issued: 7,224,769 and 7,496,178. United States and international patents pending. All other brand and product names are trademarks or registered trademarks of their respective companies.

The symbols used in this publication or used to mark the equipment have the following meanings:

- **Attention, consult accompanying documents**
- **Ionizing Radiation**
- **Type BF Equipment (providing a degree of protection against electric shock, pertaining particularly to allowable leakage currents)**
- **Instructions for handling product at end of life**
- **Reference to a radiation filter or a value of filtration**
- **Manufacturer of the device**
- **Date of device manufacture**
- **Model number or corresponding name**
- **Power supply positive/negative orientation**
- **Unique serial number for the device**
- **Dangerous Voltage**
- **Do not spray disinfectant or cleaners directly on the NOMAD PRO, handset, charger cradle or AC power supply. Damage to your device may occur.**

Thank you for choosing the Aribex® NOMAD Pro Veterinary as your X-ray solution!

At Aribex we value your business and we would like to hear from you, because your feedback or suggestions are important to us. If you have comments, please email us: NOMAD@aribex.com

NOMAD® Pro Dental Features:

- **Performance** – battery power source delivers dependable high voltage (60kV, true DC) and direct current (2.5mA).

- **Consistent Emission Radiation** – high-frequency, constant-potential X-ray generator provides high quality images, with a lower radiation dosage to the patient than standard AC X-ray systems.

- **Radiation Protection** – operator shielded from source and backscatter radiation.

- **Simple Operation** – by selecting patient size, receptor type and tooth type the factory preset exposure time is digitally displayed on the user-friendly control panel along with indicators for machine and battery status.

- **Lightweight and Ergonomic** – design provides complete flexibility and convenience, enabling exposures without moving the patients to the X-ray source.

- **Exposure Safety Feature** – cannot emit X-rays with insufficient voltage (low battery).

- **Engineered for Compatibility** – works with both film and digital imaging systems.

- **Authorized Service** – complete support and maintenance from Aribex and through our authorized distributors.

- **X-ray Locking Feature** – enables the safe training, demonstration, and storage of the device without undue concern related to unintended or unauthorized radiation emission.
1.0 Getting Started

1.1 Intended Use

The NOMAD Pro Veterinary X-ray System is designed to be used for veterinary medicine by trained veterinary professionals for producing diagnostic dental X-ray images.

1.2 Unpack, Check, and Register NOMAD Pro System

1. Unwrap individual components from the protective plastic and check for any noticeable signs of damage. The standard package system includes the following items:

- NOMAD Pro Device (08500049)
- 2 Handsets (08500056)
- Charging Cradle (08500060) and the AC/DC Power Supply (08500070)
- Certificate of Conformance, Getting Started guide (08500305), Warranty / Registration Card, and NOMAD Pro Operator Training CD (08500304)

2. Preliminary Checks:

<table>
<thead>
<tr>
<th>Item</th>
<th>Check</th>
</tr>
</thead>
<tbody>
<tr>
<td>Device Labels</td>
<td>Verify that the serialized Device label is in place (located on lower side of unit).</td>
</tr>
<tr>
<td>Other Labels</td>
<td>Verify that the serial number on the Warranty/Registration card matches the device serial number and the device serial number on the carrying case. Verify that the Handsets label (located on the top of each Handset) and the Charging Cradle label (located on the bottom of the Charging Cradle) are all in place.</td>
</tr>
<tr>
<td>Collimator Cone and Backscatter Shield</td>
<td>These two items provide operator protection and should be inspected for shipping damage.</td>
</tr>
<tr>
<td>Trigger Switch</td>
<td>Should freely move in and out when depressed and released.</td>
</tr>
<tr>
<td>Device Housing</td>
<td>Should be free of cracks or fractures.</td>
</tr>
</tbody>
</table>
Complete the product Warranty / Registration card and mail it with proper postage to Aribex today. Completing the card fulfills a condition of warranty coverage (see the inside back cover of this manual).

1.3 Charging the Handsets

**NOTE:** The handsets (batteries) are partially charged at the factory and normally need not be charged up prior to initial use of the NOMAD Pro. However, if the system has been in long-term storage prior to initial use, handsets will first require a proper charge. In fact, it is recommended to fully recharge handsets every 3 months for long-term storage to ensure that no low battery becomes damaged.

1. Use only the supplied AC/DC Power Supply (08500165), unwrap the power cord of the power supply and connect it to the charging cradle then to an AC electrical outlet (110/120V or 220/240V, dictated by the country/region). The single green indicator light on the top of the charging cradle will illuminate when the cradle has power. Position the charging cradle away from the normal patient environment. A plug adapter may be needed to accommodate the local AC configuration.

2. Invert one of the handsets and carefully slide it onto the charging cradle (do not force the handset onto the charging cradle or damage may result). Expect charge time to be less than 3 hours. The handset, charging cradle, and AC power supply may become warm to the touch while charging.

3. While the batteries are charging, the bank of LED charge indicators will illuminate green in a pulsed pattern. Once charging is complete, the bank of indicators will illuminate solid green. Remove the handset from the charging cradle once it is fully charged.

4. If the charge indicator lights change to red, it is an indication of problems; consult Section 6.2, *Troubleshooting* or an Aribex authorized service center.
2.0 Safety Precautions

2.1 Radiation Safety

This X-ray unit may be dangerous to patient and operator unless safe exposure factors, operating instructions and maintenance schedules are observed.

- Operators must follow all applicable regulatory guidelines and in-house radiation protection program in regard to patients and operators who are pregnant or expect to become pregnant.

- Operators must be fully acquainted with industry safety recommendations and established maximum permissible doses.

- Optimal operator radiation backscatter protection exists when:
  a) the backscatter shield is positioned at the outer end of the collimator cone,
  b) the backscatter shield is close to the patient,
  c) the patient is situated to accommodate exposures that allow the NOMAD Pro to be positioned perpendicular to the operator, and
  d) the operator remains within the significant zone of occupancy immediately behind the device shield.

- Do not enable NOMAD Pro until patient and operator are positioned and ready for the exposure, preventing interruption and inadvertent exposure of anyone to X-rays.

- Do not attempt an exposure if anyone other than patient is in the direct beam. If others are assisting, then they should wear protective covering.

- An exposure can be terminated for any reason by abruptly releasing the depressed trigger (for more information, see Section 4.0, Operation).
As shown in graphic representations, maximum protection (green area) from backscatter radiation (red area) exists when the NOMAD Pro is positioned near the patient, is perpendicular to the operator (with the patient’s head tilted if needed), and the backscatter shield is fully extended toward the patient and parallel to the operator.

Operation outside the protection zone (or with a diminished protective zone) requires proper precautions such as the use of lead aprons.

Do not operate if the backscatter shield or collimator cone are broken!

1) Standards for Protection Against Radiation, 10 CFR 20 (US Federal Standards), 1994 (see also NCRP Report No. 116)
2) NCRP Report No. 145 (National Council on Radiation Protection and Measurements), p7-9
4) Normalized average assumes 7,200 exposures per year, and the average length of exposure for D-speed = 0.50 seconds, F-speed = 0.25 seconds, digital sensor = 0.20 seconds
In implementing a radiation protection program, consult all applicable regulations governing radiation protection and the use of X-ray equipment, and ensure full compliance with any such regulations.

2.2 Usage and Duty Cycle

As a safety feature, NOMAD Pro will not emit X-rays with insufficient voltage (low battery).

The NOMAD Pro is also designed to avoid damage from overheating. The minimum duty cycle rating for maximum exposure (the relationship between duration and frequency of exposures taken during a rolling 60 second period) is 1:60. This duty cycle is programmed into your NOMAD Pro. Examples of optimal use:

<table>
<thead>
<tr>
<th>Exposure Duration</th>
<th>0.09 sec</th>
<th>0.20 sec</th>
<th>0.40 sec</th>
<th>1.00 sec</th>

<td>&gt;2</td>
<td>1</td>
</tr>
</tbody>
</table>

1) Standards for Protection against Radiation, 10 CFR 20 (US Federal Standards), 1994 (see also NCRP Report No. 116)

2) “Radiation Exposure with the NOMAD Portable X-ray System”, Goren AD et al, Dentomaxillofacial Radiology, 37 (2008), p109-12; normalized average (includes leakage and backscatter radiation) assumes 7,200 exposures per year, and the average length of exposure for D-speed = 0.50 seconds, F-speed = 0.25 seconds, digital sensor = 0.20 seconds

| X-ray Source Focal Spot | Fixed Beam Limiting Device | Backscatter Radiation Shielding | Primary Protective Shielding |
Do not operate NOMAD Pro, the handset, charging cradle, or AC power supply if equipment was subjected to moisture (wetting, immersing, or soaking) – return to Aribex for service.

- Do not open the housings. Doing so will void the warranty. There are no user serviceable parts inside the NOMAD Pro, handset, charging cradle or AC power supply.
- NOMAD Pro should not be used in environments where flammable cleaning agents are present.
- Locate the charging cradle away from the normal patient environment.

2.3 Cleaning

1. Routinely use a non-acetone based disinfectant wipe (according to chemical manufacturer’s recommendations) to disinfect the exterior surfaces of the NOMAD Pro and the handset in between use on each patient.

2. Leave the handset connected to the NOMAD Pro and wipe down all surfaces of the device.

3. Unplug the charging cradle before cleaning.

NOTE: NOMAD Pro, the handsets, the charging cradle, and the AC power supply are not designed to be subjected to any kind of sterilization procedure.

Do not spray disinfectant or cleaners directly on the NOMAD Pro, handsets, charging cradle or AC power supply. The connecting areas are open to ingress and damage to your device may result.

2.4 Security, Storage, and Transportation

- Do not store the NOMAD Pro, handsets, charging cradle, or AC power supply in extreme conditions: below −20°C (−4°F) or above +60°C (+140°F), or beyond 95% relative humidity (non-condensing). The optimal storage location is cool, dry, and away from direct sunlight.

- Aribex recommends that the NOMAD Pro (like all electronic equipment) be allowed to acclimate before use when switching between temperature extremes (i.e, cold storage to a warm area use or hot area storage to a cool area use).

- When finished for the day with NOMAD Pro, detach the handset.
The X-RAY LOCK and UNLOCK (Section 4.3) serves as the device security key to prevent unauthorized use. In addition, it is recommended that the device be locked away when not in use. For a further level of security, securely store handsets in a separate location.

- Take steps to ensure the NOMAD Pro will not be knocked to the ground when not in use. Lay it on its top, side or in the accessory cradle. Power will automatically shut off after a period of inactivity (approximately 3 minutes).
- Do not store or carry handsets so that metal objects can contact exposed battery contact springs.
- Some battery charge may be lost during extended inactivity (leading to fewer exposures between handset charging).

Warning:
- NOMAD Pro should not be operated if it has been dropped or performance degrades; it should be returned to Aribex for a safety check.
- When finished for the day with NOMAD Pro, detach the handset.
- For long-term storage, it is recommended to fully recharge handsets every 3 months.

3.0 Setup and Power Check

3.1 The Backscatter Shield

In addition to the radiation shielded cone, the backscatter shield provides additional protection to the operator, and features an adjustable position to permit exposures made at various angles.

1. Ideally, the shield should remain fully extended to the outer edge of the cone, as close to the patient as possible during each image taken (see 2.1, Radiation Safety).

2. You may find that the backscatter shield needs to be adjusted to accommodate position indicating devices or angled exposures. If adjustments are needed, gently glide the shield up or down along the cone using equal pressure to maintain a perpendicular alignment and avoid binding.

3. To keep the shield securely on the cone a cap is permanently attached at the outer cone end. Do not attempt to remove this cap or to remove the backscatter shield. Attempting to do so will result in damage to your device.
NOMAD Pro

3.2 Attaching a Charged Handset

1. With the NOMAD Pro placed bottom up on a secure surface, properly orient and carefully slide the charged handsets onto the base of the NOMAD Pro, (a properly oriented handset should click into place with firm pressure).

2. The clicking sound ensures the locking mechanism has secured the NOMAD Pro to the handset. To verify this lock apply slight pressure in the release direction.

![Warning: There are electric currents present at the handset terminals. Protect the handset from damage; do not probe with fingers or conductive objects.]

3.3 Checking for Power

NOMAD Pro Veterinary Control Panel

1. After locking a handset in place press the Power (.Files) button.

2. The operation control display panel will activate with a “battery power level” icon in the upper right corner. Five bars is an indication of a fully charged handset.

3. If the battery charge is too low, the NOMAD Pro will not emit an X-ray and the RECHARGE BATTERY alarm will display. (The RECHARGE BATTERY alarm may also display if the handset is not fully engaged.)

4. When a battery is depleted to the single bar level (Files), Aribex recommends the handset be recharged.

5. Replace a low charge handset with the secondary handset (which should be charged in advance).
3.4 Optional Checks

The NOMAD Pro Veterinary is factory calibrated and tested prior to release (see your Certificate of Conformance). Each time the device power is turned on, it automatically runs a self-diagnostic to ensure proper function. However, the optional checks listed below may be performed periodically as desired.

**NOMAD Pro has an X-ray disable feature that allows the X-rays to be disabled for training purposes. Test firing this X-ray unit may otherwise be dangerous to the testing technician or bystanders. See Section 4.3 for more information.**

**Power On/Off:** Attach a fully charged handset to the NOMAD Pro device. Press the Power (:inline-button: P) button and verify the Power On and Power Off states.

**Increase/Decrease Exposure Time:** With the device on, select the patient size, the image receptor type, and the tooth type. The exposure time corresponding to the selections will display on-screen. Press Increase (:inline-button: ▲) and the Decrease (:inline-button: ▼) buttons, and verify that the exposure time changes appropriately.

**Triggering:** With the device on and an exposure time selected, press and release the trigger once – this will ready the device, and the display will indicate the X-ray READY state. Press any push button on the user interface panel or wait approximately 15 seconds for the timeout – the X-ray READY state will end.

**Automatic Shutdown:** With the device on, allow approximately 3 minutes of inactivity to pass for the system to automatically turn off or shut down.

**X-ray Disable:** With the device on, press and hold down the Select (:inline-button: ◆) button and in combination then press the Patient (:inline-button: ◎) button – the device shifts into a X-RAYS LOCKED state and the buttons can be released. Repeat the process to unlock the X-ray.

**NOMAD Pro should not be operated if it has been dropped or performance degrades; it should be returned to Aribex for a safety check.**

See Section 6.1, Alarms and Alerts for more information.
4.0 Operation

4.1 Power On

Press and release Power (on) button to turn on NOMAD Pro. An audible double tone and an active display panel indicate the device has power. Settings are redisplayed according to what was last displayed or saved when the device was turned off (unless the device was disconnected from a charged handset for more than 1 minute).

4.2 Ensuring Battery Charge Is Adequate

At the completion of each day or when the battery indicator reaches one bar, recharge the handset. (Aribex recommends that you keep one handset fully charged at all times to ensure continuous operation.)

4.3 Lock / Unlock the X-ray

The X-ray lock and unlock functionality can be toggled to prevent unauthorized use when the NOMAD Pro is idle or stored.

LOCK / UNLOCK is activated by pressing and holding down the Select (on) button and then pressing the Patient (on) button – the device shifts into a X-RAYS LOCKED state and the buttons can be released. Repeat the process to "unlock" X-rays.

For security and training purposes, the operator may easily toggle between these setting as needed by repeating the key selection.

NOTE: If the Select (on) button is held down for longer than 3 seconds before the Patient (on) button is pressed, the Menu mode will activate; if the Select (on) button is pressed and released before the Patient (on) button can be pressed, the Save menu is displayed.
4.4 Ensuring the Right Exposure Time Is Set

When power is turned off, the most recent setting for the exposure time is stored in memory and redisplays when power is turned back on. However, if the battery is replaced, the display is reset to the default value.

To change exposure settings press each of the button options to toggle through the choices:

1) the Patient Size (larger or smaller),
2) the Image Receptor (film, phosphor plate, or sensor), and
3) the Tooth Group (molars, pre-molars, or incisors/canines).

Examples from factory default settings:
Smaller, Sensor, and Incisor/Canines = 0.12sec OR Larger, Film, and Molars = 0.40sec

When necessary, use the Increase or Decrease buttons to adjust the time in 0.01 second increments. Adjusted exposure settings may be saved, replacing factory settings (see Section 4.10, Technique Factor Settings and Adjustments).

4.5 Ready the Device

To prevent accidental radiation exposure, properly position patient and operator before readying the NOMAD Pro.

Press and release the trigger once to ready the device. The device will briefly display an ENBLING X-RAYS message before indicating READY.

NOTE: As a safety precaution, if the trigger is held longer than 1 second or pulled a second time while still in the ENBLING X-RAYS state, the devise will not transition to the READY state. (This is to prevent an accidental activation of the device by unintended triggering.)

The illuminated green LED, the message READY on the display panel, and a double tone alert confirm that NOMAD Pro is prepared to fire X-rays. The READY state continues until either an exposure is initiated or timeout occurs after 15 seconds of inactivity (accompanied by a double tone and the return to the Settings mode).

While the device is in the READY state, any changes to the settings (pressing any user interface panel button) will end the state.
4.6 Initiating and Completing an X-ray Exposure

To begin the exposure, press and hold the trigger. The READY message is replaced with X-RAY ON, the green LED is replaced with a yellow LED, and there is an alert tone for the duration of the exposure.

To ensure complete exposure, keep the trigger depressed until the audible tone is complete, the yellow LED is off, and X-RAY COMPLETE briefly displays.

**NOTE:** An exposure can be prematurely terminated for any reason by abruptly releasing the depressed trigger.

4.7 Power Off

Press and release the Power button to turn NOMAD Pro off.

NOMAD Pro also automatically shuts off after approximately 3 minutes of inactivity.

The NOMAD Pro display darkens, accompanied by a tone to indicate shutdown.
NOMAD Pro should not be operated if it has been dropped or performance degrades; it should be returned to Aribex for a safety check.
4.8 Exposure Techniques

As an intraoral dental X-ray system, the NOMAD Pro can be easily positioned. This high degree of flexibility easily makes possible exposures while the patient is reclined, lying completely on their back, or sitting upright.

1. When taking images, operators may hold the NOMAD Pro by having both hands on the handset grip, or for increased stability and patient safety by placing one on the grip and the other on the underside of the housing (but not on the collimator cone).

2. Position the NOMAD Pro relative to the imaging system to minimize cone-cutting.

3. When the device must be angled and the operator cannot be completely within the protection zone, ensure operator protection through the use of proper safety measures, such as the use of a lead apron. (See Section 2.1, Radiation Safety.)

4. Avoid touching the patient with the cone or backscatter shield; disposable plastic coverings can be used to prevent cross-contamination.

5. Determine what NOMAD Pro exposure time settings deliver optimal results for the type of imaging (digital or film-based) that is used on a regular basis.

**NOTE:** Both digital imaging sensors and film speeds can vary somewhat in their characteristics and could require different exposure settings to meet density preference. (See Section 4.9, Settings Menu for more information.)
4.9 Settings Menu

NOMAD Pro menus allow the operator to customize settings according to individual preferences. To access the Main Menu, press and hold down the Select (↑) button for 3 seconds. When the Main Menu appears, the operator can access the desired Menu item(s) by pressing the Increase (△) and Decrease (▼) buttons to scroll up or down. When the desired Menu item is highlighted, press the Select (↑) button to access the Menu item.

Within the Menu items there are options (such as YES and NO) which are selected using either the Increase (△) or Decrease (▼) buttons. Once a selection is made, pressing the Select (↑) button confirms the choice.

To exit the Main Menu, highlight EXIT at the bottom of the list and then press the Select (↑) button, or power the device off and then on.

| X-RAY COUNTER     | The device will display two counters. One is the **OVERALL HISTORY COUNTER** which displays the total lifetime X-ray shots for the device. The other, **TRIP COUNTER**, can at any time be reset to 0 by the operator.  
                       When **Reset** is selected and the Select (▼) button is pressed, the user will be prompted with the message **RESET TRIP COUNTER?**  
                       When **YES** is selected and the Select (▼) button is pressed, the **TRIP COUNTER** is reset to 0 and the device is returned to the counters display.  
                       When **NO** is selected and the Select (▼) button is pressed, and the device is returned to the counters display with no change  
                       When **BACK** is selected and the Select (▼) button is pressed the device returns to the **Main Menu**.  
                       **NOTE:** **RESET DEFAULTS** also resets the **TRIP COUNTER** to 0.                                                                 |
| EXIT              | Allows the user to leave the **Main Menu** and return to normal operation. (Powering off and then on also exits the menu.)                  |
4.10 Technique Factor Settings and Adjustments

The factory settings in this chart are intended as a reference starting point only, and are based upon average preferences and use with the cone perpendicular to the image receptor. Individual results may vary based upon a number of factors including image density preferences, the various imaging sensors or available film speeds and brands, patient size, practitioner techniques and preferences.

**Technique Factor** time setting can be adjusted by the operator. This is done from the main display screen following these steps:

1. Press the **Increase (▲)** or **Decrease (▼)** button until the desired time setting is selected.

**NOTE**: When the **Increase (▲)** or **Decrease (▼)** buttons are pressed AND held, the rate at which the displayed time setting changes on screen suddenly accelerates.

2. Press and release the **Select (□)** button to activate the Save menu.

3. Select **YES** by pressing the **Increase (▲)** button.

4. Press the **Select (□)** button to select **OK**.

5. Once saved, this change will be maintained in memory until overwritten or until the factory defaults are restored through the **RESET DEFAULTS** Menu item.
5.0 Handset Replacement and Care

A RECHARGE HANDSET alarm on the display panel indicates either the need to fully engage the handset or the need for a replacement handset. NOMAD Pro cannot emit X-rays with a low, depleted battery (insufficient voltage). Follow these steps to clear the RECHARGE HANDSET alarm.

1. Verify that the handset is locked in place. If so and the alarm is still present, press and release the Power (💧) button on the control panel to turn off NOMAD Pro.

2. Place the NOMAD Pro bottom up on a stable surface and depress the release button on the housing, just behind the handset, to release it from the housing.

3. Slide the Handset forward toward the backscatter shield and the collimator cone.

4. Carefully align a newly charged handset and, while avoiding possible pinch points between the housing and the handset, slide it into place – a properly oriented handset should snap into place without force. A clicking sound ensures that the handset is fastened. Make sure the handset is secure by pushing it toward the cone. When a handset is detached for more than 60 seconds, the last exposure setting is erased (and would have to be reset when the unit is turned on again).

IMPORTANT HANDSET CARE NOTES:

- Each handset can go through the full discharge/charge cycle approximately 300 times. Routinely change discharged handset with fully charged one as needed.
- The handset can be left indefinitely on the charging cradle without any damaging batteries, unless AC power to charging cradle is completely interrupted or turned off during the charge cycle.
- Battery charge will diminish during extended inactivity – fully recharge handsets every 3 months during inactivity. Never place a low charge battery into long-term storage.
- When the charging cradle senses a bad handset battery, the indicator lights will illuminate red rather than green. In this case, the batteries are inoperable and must be serviced.
- Handset communications and mechanical integrity are checked by pulling the handset trigger when it is on the charging cradle – good communication exists when the indicator lights illuminating orange.

- Do not attempt to charge a handset with damaged batteries.
- Risk of fire or explosion exists if batteries inside the handset are replaced by unauthorized service personnel; do not use batteries from other sources.
- Properly dispose of spent or damaged handset; return to Aribex or an authorized distributor for replacement and recycling. Do not place in municipal waste stream.
6.0 NOMAD Pro Care and Upkeep

6.1 Alarms and Alerts

The visual/audible alarm signals a programmed action designed to prevent harm to operator, patients, and/or NOMAD Pro. The visual/audible alerts confirm normal conditions or draw the operator’s attention to a required action.

**NOTE:** All audible signals except X-ray termination may be turned down or off in the **AUDIBLE SOUNDS** menu – see Section 4.9, *Settings Menu*.

</tr>
</tbody>
</table>
6.3 Repair and Maintenance

NOMAD Pro Veterinary is a maintenance-free product. However, a routine wipe-down with a disinfectant cloth or wipe is recommended between patients, along with a quarterly visual inspection for damage. Make sure the power is off while cleaning. It is recommended for the handset to be attached during cleaning of the device, so that the electrical contacts are not exposed. Use a non-acetone based disinfectant wipe or a cloth to wipe the exterior surfaces of the NOMAD Pro and charging cradle.

See also Section 5.0, Handset Replacement and Care for more information related to battery maintenance.

The NOMAD Pro, the handsets, and the charging cradle are NOT designed to be user-serviceable. There are dangerous voltages inside. Do not open the device housing; doing so will void the warranty.

Repairs can only be undertaken by trained service personnel. Direct all questions to an authorized distributor.

The following are user replaceable components:

- Optional Rectangular Collimator Cone Adapter (08500061)
- Handsets (08500056)
- Charging Cradle (08500060)
- AC to DC Power Supply (08500165)
- Optional Hard-Shell Carrying Case, plastic (08500036)

Damaged or faulty NOMAD Pro materials and components must be properly disposed of according to local requirements, or returned to an authorized distributor or Aribex, Inc. Please protect the environment, and do not improperly dispose of any part of the NOMAD Pro system, the handsets, the charging cradle, or the AC power supply. At end of life, return these items to Aribex for replacement, and proper disposal or recycling.

If product return is required, contact Aribex for a Return Material Authorization (RMA) number and shipping instructions to return the product to the proper facility. If the product is under warranty, you will be required to provide the serial number from the label affixed on the underside of the NOMAD Pro.

Be sure to include the RMA number on the package you are returning. Products without an RMA number cannot be processed.

Aribex will not assume responsibility for shipping damages; however, we will help you file a claim with the freight carrier. Please see warranty information at the end of this manual.
7.0 Technical Description

7.1 Basic Technical Specifications

Maximum deviation from fixed factors: ±5% (unless otherwise noted)
Total weight: 2.5kg (5.5 lbs)

Environmental

Operation
- Temperature: –5 to +40°C (+23 to +104°F)
- Relative humidity: 10% to 80%, non-condensing

Storage and transportation
- Temperature: –20 to +60°C (–4 to +140°F)
- Relative humidity: 95%, non-condensing

Classification / Spec Compliance
- Internally Powered
- Type BF
- Class IIb
- IPX0; do not operate under wet conditions
- Intermittent operation
- No conductivity with the applied part
- For use in environments where no flammable anesthetics and/or flammable cleaning agents are present; non-acetone based disinfectant wipes or cloths.

Electrical
- Rechargeable lithium batteries: 22.2V nominal; 25.2V maximum, 1.25A/hr
- Low battery alert set point: Any cell (of the 6) <3.5V
- Battery current at 2.5mA, 60kVp output: 12.5A
- Maximum energy input in one hour: 150W

X-ray Controls and Generator
- Exposure time range: 0.02–1.00 sec. (in 0.01 second increments)
- Minimum duty cycle: 1:60 (one 1 second exposure every 60 seconds)
- Minimum permanent filtration: ≥1.5mm Al (0.8mm glass, 0.5mm Al, 0.2mm plastic cap)
- Maximum output power: 150W nominal at 60kV, 2.5mA
- Generator rating: 2.5mA (±5%) at 60kVp (±10%)
- Leakage technique factors: 60kV, 2.5mA, 1.00 sec.
- Maximum air kerma at handgrips and control panel: <0.05mGy in 1 hour
Measurement Base of Technique Factors
The kV is measured during pre-pot testing using a calibrated high voltage divider with a guaranteed accuracy of ±2%. Final performance measurements are made using a NERO mAx, model 8000 X-ray meter from Victoreen. Tube current is sensed across a series connected resistor with an accuracy of ±1% and measured using a digital multimeter, prior to encapsulation; NOMAD Pro has no provision for external measurement of beam current after final manufacture. Exposure time is measured during the entire exposure, referenced to 75% rise/fall, using the NERO mAx 8000 x-ray meter.

Collimator Cone
Minimum source to skin distance 20cm (from focal spot to cone tip)
Nominal dose output at cone tip (20cm) 3.41mGy / sec.
X-ray field size and configuration 6cm diameter circle

7.2 Wiring Diagram
7.3 X-ray Tube Specifications and Characteristics

The VDT70/0.4/12CP is designed for intraoral dental imaging by an X-ray unit, and is available for nominal tube voltage with self-rectified or constant potential circuit – manufactured by KaiLong; distributed in the U.S.A. by Vista Technology.

- Nominal tube voltage: 60kV
- Nominal focal spot (IEC 60336:1993): 0.4mm
- Maximum anode heat content: 4500J
- Maximum current continuous service: 1.5mA x 70kV
- Maximum anode cooling rate: 100W
- Nominal anode input power: 430W
- Target material: Tungsten
- Target angle: 12°
- Filament characteristics: 2.2–3.0A, 2.0–3.5V
- Minimum inherent filtration (IEC 60522:1999): 0.8mm Al / 50kV

X-ray source assembly maximum heat content: 6500J
X-ray source assembly (mfg by VMI): PS454
NOTE: The X-ray source assembly heating and cooling curves are equivalent to the anode heating curves shown here. Maximum continuous heat dissipation will be made available upon request from Aribex.

7.4 EMC Data

Independent laboratory testing for electromagnetic compatibility for conformity to the Sub-clause 5.10 requirements of ISO/IEC 17025 “General Criteria for the Competence of Testing and Calibration Laboratories” was conducted by:

Nemko USA, Inc.
11696 Sorrento Valley Rd, Suite F
San Diego, CA 92121-1024
USA

The NOMAD Pro Dental X-ray System has been tested and found to comply with the limits of electromagnetic compatibility standards for medical devices, which provide reasonable protection against harmful interference in a typical medical/dental setting. The NOMAD Pro may generate and radiate radio frequency energy that causes interference to other devices in the vicinity, if not used in accordance with the instructions (though there is no guarantee that interference will not occur in a particular instance). If interference occurs, the user is encouraged to try the following corrective measures: reorient or relocate the receiving device; increase the separation between the equipment; consult the device manufacturer or field service technician for help.

NOMAD Pro is intended for use in the electromagnetic environment as specified. The following tables describe the tests performed and the status of the testing. The NOMAD Pro uses RF energy only for its internal function. In addition, the housing includes conductive shielding; therefore, its RF emissions are very low and are not likely to cause any interference in nearby electronic equipment.

The test results show that the NOMAD Pro is suitable for use in all establishments, including domestic establishments and those directly connected to public low-voltage power supply network that supplies buildings used for domestic purposes.

<table>
<thead>

# NOMAD Pro

## 7.5 Optional Calibration Checks

The NOMAD Pro is factory calibrated and tested prior to release (see your Certificate of Conformance) and there are no adjustment options. A self-diagnostics is completed each time the device is powered up. However, the optional checks listed below may be performed by a qualified technician as desired.

Setup a calibrated Performance Meter (such as the Victoreen NERO, mAx model 8000) according to manufacture’s specifications to detect and report the following: X-ray Tube Voltage [kV Effective Mode], Radiation Time [ms Effective Mode], and Dose [mR Average Mode]. The filter card for the Test Detector should be in the 50-100kVp position.

**Measurement Method:** Final performance measurements are made using a NERO mAx, model 8000 X-ray meter from Victoreen. Tube current (mA) is sensed across a series connected resistor with an accuracy of ±1% and measured using a digital multimeter, prior to encapsulation; NOMAD Pro has no provision for external measurement of beam current after final manufacture. Exposure time is measured during the entire exposure; referenced to 75% rise/fall, using the NERO mAx 8000 X-ray meter. Accelerating voltage (kV) is measured at both peak (kVp) conditions and effective conditions (kVeфф), which is the equivalent kV as if the kV were constant through the whole exposure time. Linearity is calculated per IEC 60601-2-7, 50.102.2a.

This X-ray unit may be dangerous to testing technician and any bystanders unless safe test exposure factors, such as placing the Test Detector in a lead lined box or the use of a protective lead apron are observed.

Enable the NOMAD Pro and, with the cone perpendicular to the Test Detector, make exposures into the Test Detector and capture the resulting data.

Compare the result with the factory release parameters (indicated in the chart below). For results outside these parameters, discontinue use and contact your dealer/distributor or Aribex.

A duty cycle of 1:60 is required after each X-ray discharge to prevent over-heating damage to the X-ray tube.
LIMITED WARRANTY

COVERAGE. Aribex, Inc. warrants its medical and dental x-ray equipment to be free from any defects in material or workmanship for a period of one (1) year from the date of purchase. Aribex, Inc. also warrants any accessories purchased from Aribex to be free from any defects in material or workmanship for the period of one (1) year from the date of purchase.

The liability of Aribex, Inc. is limited to repair or replacement of any parts that Aribex or its authorized resellers determine to be defective. Contact Aribex for a Return Material Authorization (RMA) number and shipping instructions. Parts proving defective shall be repaired or replaced free of charge (labor and domestic shipping included), if defective equipment is returned freight collect to Aribex (Charlotte, NC, USA) or the location of the authorized service center. Equipment repaired or replaced under warranty shall continue to be warranted for the balance of the original warranty term. All warranty claims must be made not later than ten (10) business days following the expiration of the applicable warranty period.

LIMITATIONS OF COVERAGE. This warranty does not apply to equipment that is or has been abused, misused, or altered (including opening enclosure or tampering), improperly maintained, subjected to use beyond rated conditions, or damaged as a result of any carelessness or accidents. This warranty does not cover ordinary wear and tear or maintenance.

LIMITATIONS OF LIABILITY. Aribex, Inc. makes no other warranty, either expressed or implied, with respect to any equipment purchased from Aribex, including without limitation any implied warranties of merchantability or fitness for a particular purpose, whether or not Aribex may have been informed of the actual uses to which any of such equipment may be put. Aribex, Inc. shall not under any circumstance be liable for incidental, indirect, consequential, punitive or exemplary damages, including without limitation damages for delay or lost profits, and in no event shall liability of Aribex arising from the purchase, sale or use of the equipment, or breach of any warranty made above, exceed in the aggregate the purchase price paid therefore.
