FX-70-6MP™
Multi-Purpose Marine Epoxy Grout

DESCRIPTION
FX-70-6MP™ Multi-Purpose Marine Epoxy Grout is a three-component, 100% solids, moisture-tolerant epoxy grout specifically designed for underwater applications as part of the FX-70® Structural Repair and Protection System.

WHERE TO USE
• As a high-strength epoxy grout component of the FX-70 structural repair and protection system
• As a high-strength epoxy grout in wet or dry applications
• As an underwater repair mortar

FEATURES
• Easily pumped or poured
• High-strength, low absorption, impact-resistant grout
• Can be placed underwater without de-watering
• Resistant to chemical and aggressive water environments

PRODUCT DATA
All testing performed at 73°F (23°C) and 50% R.H.

Generic Description
Underwater Epoxy Grout

Packaging
FX70-6MPKT3-2 contains:
• 3 US gallon (11.4 L) epoxy kit +
  (2) 50 lb. (22.7 kg) bags of filler
FX70-6MPKT3-3 contains:
• 3 US gallon (11.4 L) epoxy kit +
  (3) 50 lb. (22.7 kg) bags of filler
FX70-MPKT15-10 contains:
• 15 US gallon (56.8 L) epoxy kit +
  (10) 50 lb. (22.7 kg) bags of filler
FX70-MPKT15-15 contains:
• 15 US gallon (56.8 L) epoxy kit +
  (15) 50 lb. (22.7 kg) bags of filler

Color
Dark tan

Mixing Ratio
Epoxy: 2A:1B
Filler: 100–150 lb. (45–68 kg) per
3 US gallon (11.4 L) unit of epoxy

Product Yeld
1.07 ft.³ (0.029 m³) for 3 US gallon (11.4 L)
1.34 ft.³ (0.038 m³) for 3 US gallon (11.4 L)

Pot Life
45 minutes at 70°F (21°C)

Storage
Store dry between 40° and 95°F (4°–35°C)

Shelf Life
2 years in unopened packaging

VOC
2 g/L (mixed)

TECHNICAL INFORMATION
All testing performed at 73°F (23°C) and 50% R.H. (+/- 2°F (1.1° C))

Notes
1. High flow = 3 US gallons (11.4 L) of epoxy to 100 lb. (45 kg) of filler
2. Standard flow = 3 US gallons (11.4 L) of epoxy to 150 lb. (68 kg) of filler
**SURFACE PREPARATION**

Surface must be at least 40°F (4°C) prior to application. All surfaces must be sound and free of loose rust, marine growth, oil, and other contaminants. Consult a qualified professional engineer in all cases when section loss exceeds 25%.

**Concrete:** Prepare surface by high-pressure water-blasting or other mechanical means to achieve ICRI Guideline 310.2R CSP 6-9. Repair or replace any reinforcing steel as determined by a qualified professional engineer.

**Steel:** Prepare surface by high-pressure water-jetting or other mechanical means necessary to achieve SSPC-SP 12/NACE 5 WJ-4. Repair or replace any structural steel elements with excessive section loss as determined by a qualified professional engineer.

**Wood:** Prepare surface by high-pressure water-blasting or other mechanical means necessary to achieve a sound surface, free of all contaminants.

All submerged forms should be installed by certified professional divers. All forms must be sealed appropriately to prevent grout leakage during installation.

**MIXING**

For optimal product performance, condition individual components to 70°F (21°C) and stir liquid components thoroughly prior to use. Proportion Component “A” and Component “B” at a 2A:1B ratio by volume in a clean pail. Mix thoroughly with a low-speed (300–600 rpm) drill and mixing paddle for 2–3 minutes, scraping unmixed material from sides and bottom of mixing container as needed, taking care to prevent air entrapment. Continue mixing, and slowly add Component “C” to avoid clumping, at a rate of 100–150 lb. per 3 US gallon unit of epoxy, scraping the sides and bottom as needed. Mix for approximately 2–3 minutes or until a uniform consistency is achieved. For large pours requiring multiple units, mix the liquid components as instructed above, then transfer the liquid to a mortar mixer and add Component “C,” mixing to a uniform consistency.

**APPLICATION**

FX-70-6MP™ can be troweled, poured, pumped, or tremied. Properly mixed FX-70-6MP can be poured from the top of the jacket through standing water. For pumping applications, pump properly mixed FX-70-6MP as follows: Install pumping ports at 90 degrees from tongue and groove joint, alternating sides. Place the first port approximately 1 ft. (300 mm) from the bottom of the jacket. Place subsequent ports at a maximum 5 ft. (1.5 m) vertical spacing, alternating sides. Begin pumping from the lowest port and move up from port to port. Do not exceed 10 ft. (3 m) pumping distance from any individual port. All submerged forms should be inspected by a certified professional diver during the filling process to check for leaks and proper placement. For tremie applications, make sure the hose extends all the way to the bottom of the form. Fill the form to the desired level, allowing water to displace from the top of the form. Depending on the depth of the pour and size of the vessel, the tremie hose may need to be retracted as the form fills to maintain flow.

**LIMITATIONS**

- Do not apply in water temperatures below 40°F (4°C) or above 95°F (35°C).
- Minimum application thickness is ½ in. (12.7 mm).
- Underwater product placement should be attempted only by certified and experienced diving contractors.
SAFETY

CAUTION

Component “A”: May cause eye and skin irritation. May cause skin sensitization.
Component “B”: CORROSIVE! Harmful if swallowed. Harmful if absorbed through skin. Severe irritation to eyes. Moderate skin irritant. Components of the product may affect the nervous system.
Component “C”: May cause serious eye and skin irritation or damage. Contains silica; do not breathe dust.

Protective Measures: The use of safety glasses and chemical-resistant gloves is recommended. Use appropriate clothing to minimize skin contact. The use of a NIOSH-approved respirator is required to protect respiratory tract when ventilation is not adequate to limit exposure below the permissible exposure limit (PEL). Refer to Safety Data Sheets (SDS) available at strongtie.com/sds for detailed information.

FIRST AID

Eye Contact: Immediately flush eyes with plenty of cool water for at least 15 minutes while holding the eyes open. If redness, burning, blurred vision, or swelling persists, seek medical advice.
Skin Contact: Remove product and wash affected area with soap and water. Do not apply greases or ointments. Remove contaminated clothing. Wash clothing with soap and water before reuse. If redness, burning, or swelling persists, seek medical advice.
Ingestion: DO NOT INDUCE VOMITING. Seek medical advice. Never administer anything by mouth to an unconscious person. Rinse mouth out with water. Never leave affected person unattended. If vomiting occurs spontaneously, lay affected person on their side, keeping head below hips to prevent aspiration of material into lungs.
Inhalation: Remove affected person to fresh air. If affected person continues to experience difficulty breathing, seek medical advice.

CLEAN-UP

SPILLS

Liquid or Mixed Material Spills: Construct a dike to prevent spreading. Soak up with absorbent material such as clay, sand or, other non-reactive material. Place in leak-proof containers. Keep out of sewers, storm drains, surface waters, and soils.
Powder Spills: Sweep or vacuum material and place in a suitable container. Keep out of sewers, storm drains, surface waters, and soils.

SURFACE CLEAN

Liquid or Mixed Materials: Wipe up uncured material with cotton cloths. If desired, scrub area with abrasive, water-based cleaner and flush with water. If approved, solvents such as FX-Epoxy Cleaner, ketones (MEK, acetone, etc.), or adhesive remover can be used. Cured material can be removed only by mechanical means.
Powder: Remove any residue with hot soapy water.

TOOLS AND EQUIPMENT

Liquid or Mixed Materials: Remove uncured material with FX-Epoxy Cleaner, ketones (MEK, acetone, etc.), or adhesive remover. Cured material can only be removed by mechanical means.
Powder: Clean with hot soapy water immediately after use.

SKIN

Use a non-toxic, pumice-based soap, citrus-based hand cleaner, or waterless hand cleaner towel. Never use solvents to remove product from skin.

DISPOSAL

Dispose of container and unused contents in accordance with federal, state, and local requirements. Containers may be recycled; consult local regulations for exceptions.

LIMITED WARRANTY

This product is covered by the Simpson Strong-Tie RPS Product One-Year Limited Warranty, which is available at strongtie.com/limited-warranties or by calling Simpson Strong-Tie at (800) 999-5099.

IMPORTANT INFORMATION

It is the responsibility of each purchaser and user of each product to determine the suitability of the product for its intended use. Prior to using any product, consult a qualified design professional for advice regarding the suitability and use of the product, including whether the capacity of any structural building element may be impacted by a repair. As jobsite conditions vary greatly, a small-scale test patch is required to verify product suitability prior to full-scale application. The installer must read, understand, and follow all written instructions and warnings contained on the Limited Warranty, product label(s), Product Data Sheet(s), Safety Data Sheet(s) and the strongtie.com website prior to use. For industrial use only by qualified applicators. KEEP OUT OF REACH OF CHILDREN!
