January 31, 2019

Dear Simpson Strong-Tie Customer,

We’ve become aware of some errors in the recently printed 2018 Anchoring, Fastening and Restoration Systems for Concrete and Masonry catalog (C-A-2018).

The error and the respective correction is as follows:

Page 219: ETI Injection Epoxy — Application Considerations

Third bullet should read 40°F not 60°F

- Apply to concrete 40°F or above. For best results, warm material to 60°F or above prior to application.

We apologize for any inconvenience that may have been experienced as a result of incorrect information.

Kindest regards,

Simpson Strong-Tie
